Fruit and Ornamental Trees

SHRUBS, ROSES, GRAPE VINES, SMALL FRUITS, ETC.

WEST JERSEY NURSERY CO.,

STANTON B. COLE, Proprietor,

BRIDGETON, NEW JERSEY.

BRIEF DIRECTIONS FOR TRANSPLANTING TREES AND PLANTS AND FOR THEIR SUBSEQUENT CULTURE.

Prepare the ground as for a crop of corn; then dig the holes just large enough to admit the roots without crowding and doubling them up. Avoid deep planting, which is decidedly injurious to the tree, and when excessive may cause its death. It should be no deeper than it stood before removal from the Nursery. A mound of earth, one foot high, should be heeled up around the trees when planted in the Fall—it makes them firmer to withstand the Winter and is a protection to the roots. It should be leveled again in the Spring.

Before planting, the injured parts of the roots should be cut off smoothly with a sharp knife.

Shortening the branches is another very important matter to the life and vigor of the tree, and should be done at the time of planting. It consists in cutting back the ends of the branches, but to what extent it should be done depends upon circumstances. If a tree has lost the greater portion of its roots, a severe shortening in of the head will be necessary; if only a small portion of the roots are cut off, moderate pruning will be sufficient. In all cases it should be done in a manner corresponding with the loss of roots.

Cultivate the orchard a few years with hoed crops. To insure regular crops of fruit, an orchard should be kept afterwards permanently in sod, and manure applied to the surface.

Dwarf Pears should be planted so as to cover about one inch above the graft. Cut back about one-third of the last year's growth every year. All dwarf fruit trees should receive high cultivation, and be kept clear of grass and weeds.

Small Fruits, such as Raspberries, Blackberries, etc., should be cut down close to the ground and not allowed to fruit the first year.

The best time for planting Evergreens is end of October or commencement of November. The wood is then well ripened and can stand the severity of the winter; the plants are ready to start growing when the spring opens, and are not as liable to suffer by early summer droughts as Evergreens, which are planted in the spring. And lastly, when packed in boxes for shipment, they are not as liable to heat in the late fall as in the spring, when the weather begins to get warm.

FRUIT DEPARTMENT.

APPLES.

The following varieties have been well tested and can be recommended. The selection of varieties ought to be governed by the climate and soil of the planter, as it is well known that several good *New York* varieties do not prove profitable for *Peunsylvania*, etc.

Summer Varieties.

Bough—Large; pale greenish-yellow; sweet, rich flavor; good bearer. First of August.

Carolina Red June—Fruit medium size; skin smooth, shaded with deep red. Flesh white, tender, juicy, with sub-acid flavor; very good and productive. August.

Early Strawberry—Medium size; yellowish-white, striped with red; tender, mild, fine flavor; good bearer. August.

Early Harvest—Medium size, pale yellow; rich, sub-acid flavor; very productive. Commencement of August.

Early Ripe Large, yellow, handsome; good grower and prolific bearer. Ripens about the same time as Early Harvest. July.

Golden Sweet—Rather large, pale yellow; very sweet and good; good bearer. August.

Keswick Codlin—Large, tender, juicy, acid; excellent for cooking; productive and early bearer. July to October.

Red Astrachan—Rather large; deep crimson, with a pale white bloom; juicy, acid flavor; productive. August.

Sops of Wine—Medium; yellow, splashed with red, sprinkled with gray dots; flesh white, pleasant, sub-acid; strong grower; productive. August and September.

Summer Rambo—Medium to large; green, striped with red; sub-acid; good. Good market apple. September.

Tetofsky—A Russian apple which proves profitable for market; comes early into bearing and produces annually. Very hardy; fruit round and smooth, with yellow ground, handsomely striped with red. Flesh white and juicy. August.

Yellow Transparent—A new Russian variety, ripening a week or two before Tetofsky. Skin, when fully ripe, pale yellow; flesh tender, juicy, lively, sub-acid.

Fall Varieties.

Alexander—Very large; crimson striped, juicy. Quality and productiveness fair. A Russian apple. October.

Duchesse of Oldenburgh—Medium; yellow, striped with red; rich, juicy and excellent; a productive variety introduced from Russia. September.

Fall Jenetting Large, greenish-yellow; sub-acid, vigorous and productive. September and October.

Fall Pippin—Very large; yellow, rich, high flavored; moderate bearer. October to November.

Fall Strawberry—Medium; yellow, striped with red; juicy, sub-acid; excellent, productive. September and October.

Gladstone—Resembles the Oldenburgh very closely, but is larger, of finer flesh, and will keep a little longer.

Gravenstein—Very large; red striped; first quality; very productive. September and October.

Haas, or Fall Queen—Medium, striped with red. Flesh white, juicy, acid, rich, very good.

Jersey Sweeting—Medium; striped red and green; tender, juicy and sweet. September to October.

Maiden's Blush—Rather large; pale yellow with red cheek; beautiful, valuable for market; abundant bearer. September to October.

Ohio Nonpareil—Large; light yellow, striped with red; flesh yellowish-white, fine grained, tender, rich and juicy. Slightly aromatic flavor. October and November.

Rambo—Medium; flat, streaked and marbled with yellow; very tender, rich, sub-acid flavor; good bearer. October to December.

Red Beitigheimer—Very large, light yellow, covered with red; purplish crimson when exposed to the sun; flesh sub-acid, pleasant; a great bearer. September.

Winter Varieties.

Arkansas Black, or Paragon—Originated in Tennessee. Fruit like Winesap in color and flavor, but larger in size and is a better keeper. Tree a vigorous grower, hardy and productive; comes into bearing quite young. February to April.

BISMARCK APPLE.

Bailey's Sweet—Fruit large, round, mottled and striped deep red; flesh yellow and tender. November to March.

Baldwin—Well known ; large, bright red ; juicy and rich ; productive. December to March.

Ben Davis—(*New York Pippin*)—Large, striped with bright red ; juicy, sub-acid, good. Much esteemed in the West and South. December to March.

Belle de Boskoop—Large, bright yellow ; crisp, firm, juicy, sprightly sub-acid, hardy. Very good. December to January.

Belleflower—Yellow ; large ; crisp and juicy, aromatic flavor ; moderately productive. November to March.

Bismarck A new variety of great promise from New Zealand. It is a very prolific bearer and commences to bear when quite young. Fruit large and of brilliant color. January to March.

Bullock Pippin, or Ewalt—A Pennsylvania apple ; large, bright yellow, with shades of crimson in the sun ; white, tender flesh, sub-acid ; first quality. A good keeper. November to March.

Canada Reinette—Very large, dull yellow ; flesh firm, juicy and rich. Tree a free grower and good bearer. Highly esteemed in France. December to March.

Cider, Smith's—Popular Pennsylvania fruit ; greenish-white, striped with red ; juicy, tender, mild, pleasant flavor ; very productive, good keeper. December to March.

Cooper's Market—(*Cooper's Redling*) - Medium size ; yellowish, shaded with red and striped with crimson ; white and tender flesh, sub-acid ; very productive and a late keeper. December to May.

Delaware Winter—Originated in Delaware. Remarkable for its keeping qualities. Fruit medium to large, highly colored ; flesh fine grained, juicy, crisp, excellent. Prolific, and commences to bear early.

Dickinson From seed of the Belleflower. Medium to large, yellow, almost covered with faint red streaks ; mild, sub-acid, very juicy. A prolific and regular bearer. January to March.

Fallwater—Favorite Pennsylvania fruit. Very large, yellowish-green ; valuable market variety. Very productive. November to February.

Fameus, or Snow Apple—Medium size ; very handsome, deep crimson ; tender, white fleshed, juicy, high flavored ; productive. November to December.

Gano—An improved Ben Davis. Medium, deep red ; superior keeper. Productive and annual bearer.

Gilliflower—Medium size, oblong, conical ; skin very dark red ; flesh white, dry, mild, sub-acid ; good ; very productive. November to February.

Grimes' Golden—Medium, rich golden yellow ; crisp, tender, juicy ; does well in Pennsylvania. Early bearer and excellent keeper. January to April.

Hubbardston Nonsuch—Large ; yellowish ground with red stripes and spots ; sweet and rich. Highly esteemed. November to January.

Jacob's Sweet - A large and exceedingly showy fruit. Clear, rich yellow, deeply shaded with brilliant carmine ; flesh crisp, fine grained and of best quality. Also a remarkably good keeper. Tree is a strong grower, heavy yielder, annual bearer. April and May.

Jonathan—Medium size, red and yellow ; flesh tender, juicy, rich ; a moderate grower. Shoots light-colored, slender and spreading ; very productive. Fine variety for table or market. November to March.

Krauser—Berks Co., Pa., fruit ; medium, yellow ; handsome appearance and a good keeper. December to April.

King of Tompkins Co.—Large ; yellow, striped with red ; popular variety, good bearer. December to March.

Lady—Small, but very pretty ; yellow, with bright, crimson cheeks. It is a very showy little apple, and is much used for the dessert. December to May.

Lankford Seedling—A fine, showy apple ; medium to large ; yellow striped, nearly covered with bright red. Flesh firm, juicy, mild, sub-acid. One of the best late-keepers. January to May.

Mann—Fruit resembles R. I. Greening, but is larger. Tree hardy, comes into bearing young, and loads itself about every year with large crops. February to June.

McIntosh Red—Originated in Canada. Above medium size. Yellow, nearly covered with dark rich crimson. Flesh white, tender, juicy. Tree very hardy; good bearer of excellent fruit. November to April.

Monmouth Pippin—Fruit large; color yellow, with russet dots; juicy, fine, sub-acid. Very good to best. October to November.

Northern Spy—Large, striped and covered with dark crimson; a New York fruit; juicy, high flavor, great bearer. January to May.

Paragon—(See Arkansas Black.)

Peck's Pleasant—Large, yellow, with blush cheek; fine flavor; a good substitute for Newtown Pippin; good bearer and keeper. November to April.

Pewaukee—Hardy and productive; fruit medium to large; skin bright yellow, striped and mottled with light and dark; flesh white, juicy, sub-acid; good. January to May.

Rawle's Janet—(*Never Fail*)—Valuable, of southern origin; medium; yellow, striped with red; crisp, rich and juicy; very productive and a good keeper. January to May.

Red Romanite—(*Gilpin or Carthouse*)—Medium; dark red, white flesh; crisp, sub-acid, makes good cider; late keeper, very productive. February to May.

Rhode Island Greening—Well known; excellent variety; large, light, greenish-yellow; firm and rich, excellent flavor; crooked grower, good keeper and good bearer. November to March.

Roman Stem—Medium; skin yellow, covered with large russet dots; flesh yellowish-white, crisp, juicy. November to March.

Róme Beauty—Large; striped with bright red; flesh tender, juicy, sprightly; moderate grower. Origin Ohio. December to February.

Russett. American Golden—(*Sheep Nose*)—Below medium; dull yellow; yellow flesh, very tender, rich, spicy flavor; a great bearer and good keeper. December to March.

Russett. English—Medium; pale yellow; firm and crisp, mild, sub-acid flavor, late keeper; very productive. Keeps till June.

Roxbury Russett—Medium size; skin at first dull green, covered with brownish-yellow russet when ripe; flesh greenish-white, moderately juicy, with rich, sub-acid flavor; good to very good. January to June.

Salome—Fruit medium; pale yellow, slightly shaded with pale red, splashed and striped with dark red, and sprinkled with small yellow dots; flesh tender, juicy, mild sub-acid. Comes into bearing early. Very hardy. January to June. An excellent keeper.

Seek-no-Further—(*Westfield*)—Fruit large; dull red over a pale clouded green ground, sprinkled with obscure yellow dots. Flesh white, tender, with a rich pear-main flavor. Very good. October to February.

Smokehouse—Popular Pennsylvania fruit, and valued highly; above medium; yellow, shaded with bright red, sprinkled with gray and brown dots; firm, juicy, sub-acid flavor; good bearer. November to February.

Spitzenburgh—(*Esopus*)—Fruit large; considered equal to Newtown Pippin, flesh yellow, rather firm, crisp; juicy, rich flavor; best. December to February.

Stark—Fruit large; skin greenish-yellow, shaded, splashed and striped with light and dark red. Moderately juicy, mild sub-acid. January to May.

Sutton Beauty—Fruit medium to large, round, handsome; skin waxen yellow, striped with red. Flesh whitish, tender, juicy, sub-acid; quality very good. Keeps very well. Tree free and handsome grower. November to February.

Talman's Sweeting—Medium; light yellow with a pale blush; rich and excellent, very productive. December to April.

Twenty Ounce—Fruit large and showy; greenish-yellow, boldly splashed and marbled with stripes of red; good to very good. October to January.

Wagener—Medium, dark red; mild, tender, sub-acid; excellent variety, abundant bearer. December to March.

Walbridge—Fruit medium size; pale whitish-yellow when fully mature; flesh white, fine, crisp, tender and juicy. January to May.

Wealthy—Medium size; whitish-yellow, shaded with deep rich crimson; flesh white, fine grained, tender, juicy, lively, sub-acid; hardy and productive. December to February.

Winesap—Medium, dark red; yellow flesh, firm, crisp, high flavored; fruit hangs late on the tree; excellent for cider, very good bearer, and excellent keeper. December to May.

Winter Sweet Paradise—Pennsylvania apple, hardy and productive; green when picked, with brown flush, becoming paler at maturity; flesh white, fine grained, juicy and very good. November to March.

Wolf River—Very hardy; fruit very large, whitish color, mostly covered with red and numerous brown specks. Flesh firm, sub-acid. Regular and enormous bearer. March.

York Imperial—A very fine Pennsylvania apple of medium size, oblate, white, shaded with crimson; flesh firm, crisp, juicy, sub-acid. November to February.

CRAB APPLES.

Valuable for Preserving and Desirable for Ornament.

Red Siberian—Small; bright red, covered with a light transparent bloom; excellent for preserving. Early September.

Yellow Siberian—Small; pale yellow, also very valuable for preserving. September.

Gen. Grant—Fruit round, of large size for a crab; skin cream yellow ground, broken stripes, becoming red on sun exposed side. Very mild sub-acid. October.

Hyslop—Large; dark red, with a blue bloom; good for cider.

Montreal Beauty—Fruit large; bright yellow, covered and shaded with rich red. Flesh yellowish, rich, firm, acid; one of the most beautiful of all crabs. September to October.

Transcendant—Large, yellow; mostly covered with red; productive and desirable. Best early Fall variety.

Van Wyck Sweet—A valuable variety. Fruit large; skin yellowish-white, colored red and covered with bloom; flesh sweet and tender; core small. September.

Whitney's No. 20—A seedling of the Siberian Crab. Said to be large, striped, almost red; flesh yellowish-white, very juicy, sub-acid. Good for canning and making into cider. August.

PEARS.

Dwarf Pears—For small gardens and for cultivation by amateurs, or persons likely to devote the necessary attention to them, Dwarf Pears will certainly prove remunerative in a suitable soil, and with proper selection of varieties. On very light, sandy soil, or gravelly soils, Dwarf Pears will not prove so well as—

Standard Pears—These are generally preferred for orchard culture. They will not bear fruit at so early an age as Dwarf Pears, but they will flourish on a greater variety of soils, and will bear neglect better; without proper cultivation, however, they will, like most trees, fail to give satisfaction.

Gathering Pears—Pears, as a general rule, should never be allowed to ripen on the tree. Summer and Fall varieties should be gathered at least ten days before maturity; Winter Pears about the time frosty weather sets in.

The varieties marked a (*) succeed as well as Dwarfs. The following list includes the most valuable varieties:

Summer Varieties.

Bartlett—Large ; clear yellow skin ; buttery, very juicy and high flavored, early and great bearer. September.

***Clapp's Favorite**—Large, resembling Bartlett ; ripens a few days earlier ; productive. August and September.

***Doyenne d'Ete**—(*Summer Doyenne*)—Small ; yellow, with red cheek ; rich, sugary, melting ; very early and fine. Last of July.

Idaho - New. Very large ; nearly round, resembling Easter Beurre. Yellow, with brownish-red on sunny side. Flesh melting, juicy ; quality best. Wood and foliage resembles Bartlett. Hardy, vigorous and prolific. September.

Koonce—Best early pear. Tree vigorous, free from blight, fine grower. Pear medium to large, yellow, with one side covered with red ; does not rot at the core ; very productive ; handsome and good shipper. The earliest pear.

Lawson—Large ; color a brilliant crimson on a yellow cheek ; very beautiful. Flesh rich and juicy, but not of high quality. July and August.

Le Conte—Fruit large ; skin smooth, pale yellow ; good quality. Tree very vigorous, said to be free from blight. Very prolific. October.

***Osband's Summer**—Medium size, rich yellow color ; excellent quality, mild and pleasant flavor. August.

***Tyson**—Medium ; yellow, reddish cheek ; very melting and juicy, sweet, excellent flavor, very productive. September.

Wilder—Small to medium ; bell-shaped. Pale yellow ground with deep shading of carmine ; core very small. Flesh whitish-yellow, fine grained, tender, sub-acid. Quality very good. August.

Fall Varieties.

***Beurre d'Anjou**—Large ; yellowish, somewhat russetted, red cheek ; fine grained, buttery, melting and excellent. October to December.

***Duchesse d'Angouleme**—Very large, dull yellow ; buttery, rich, juicy, and excellent ; does best as a dwarf. October to November.

Flemish Beauty—Large ; greenish-yellow, russetted ; sweet and rich ; excellent flavor ; productive. September and October.

Garber—Large, round, handsome ; skin waxy yellow, smooth ; excellent for canning and preserving. Tree vigorous and free from blight. September.

***Howell**—A fine large pear, sweet and melting ; pale yellow, with a red cheek and patches of russett. September and October.

***Louise Bonne de Jersey**—Large, beautiful, first-rate pear ; pale green with a dark blush ; buttery, juicy and rich. September and October.

Kieffer's Hybrid—Large and showy ; supposed to be a seedling of a Sand Pear accidentally crossed with some cultivated kind grown near it. Skin is a rich yellow color, tinged with red. Excellent for canning purposes. Very productive. October and November.

Rutter—Medium to large ; very good. Skin greenish-yellow, covered with russet ; juicy. October and November.

Seckel—Small ; dull yellow, with russet and colored cheek ; very juicy buttery and rich ; very high flavored and productive ; a slow grower. September and October.

Sheldon—Above medium ; dark yellow or russet ; rich, melting and high flavored ; first-rate quality. October and November.

Winter Varieties.

Lawrence—Medium light yellow, mostly sprinkled with dots ; buttery, rich and aromatic ; very reliable and productive. December.

Lincoln Coreless—Fruit very large, yellow, juicy ; almost without core. A very late winter pear which must ripen after being picked.

Vermont Beauty—Fruit medium, very handsome, yellow with bright carmine cheek; flesh is rich, juicy, aromatic, and of fine quality. Ripens immediately after Seckel.

***Vicar of Wakefield**—Large, long, yellow, often a red cheek; juicy and very pleasant; very productive. November to January.

Pears of Recent Introduction.

Not fully tested yet in this vicinity :

Rossney Medium to large; fine grain flesh; melting and juicy, very sweet. Ripens two weeks after Bartlett. Excellent keeper and shipper. Skin creamy, with crimson blush.

Worden-Seckel—A seedling of Seckel; enormous bearer, good keeper. Does not rot at the core. Ripens just after Seckel.

CHERRIES.

The Cherry will prove successful on light, well drained soil. Any tree that is attacked by the "black knot," can be saved by cutting off all indication of the disease as it appears. The following list embraces the really desirable kinds.

Class I—Heart.

Black Eagle—A fine, large, black cherry, of first-rate quality and productive; very sweet and rich; one of the best. First of July.

Black Tartarian—Very large, black, half tender; sweet, rather rich, fine flavor; deserves general cultivation; tree a strong, upright, beautiful grower and good bearer. Last of June.

Downer's Late Red—Above medium; light red mottled with amber; melting and delicious, excellent, very productive; not subject to rot by rainy weather. July.

Early Purple Guigne—Medium, dark purple; juicy, tender and sweet. Early in June.

Elton—Large, pale yellow, streaked and mottled with red; half tender, juicy, rich and delicious. June and July. Very much like Gov. Wood, only more hardy.

Ida—Medium to large; very hardy. Skin light yellow, nearly covered with pale red; juicy, fine quality; tree vigorous, upright, abundant and regular bearer. Middle of June.

Ohio Beauty—(*Dr. Kirtland's*)—Large; dark and pale red marbled; tender, juicy, high flavored. Towards end of June.

Ox-Heart—Large; red skin, red and half tender flesh, pleasant juice, of second quality, in point of flavor. Last of June.

Class II—Bigarreau.

Napoleon—Very large; pale yellow, spotted with deep red; very firm and juicy; very productive, and a constant bearer. First of July.

Schmidt's Bigarreau—Largest black cherry; flesh dark, tender, juicy, with a fine rich flavor.

Yellow Spanish—Large; light yellow, with red cheek, having a waxen appearance; firm, juicy and sweet; one of the best; very productive. Last of June.

Windsor—Originated in Canada. Fruit large, liver-colored, resembling Elkhorn or Tradescant's Black Heart; firm and of fine quality. Tree hardy and very prolific. A valuable late variety.

Class III—Duke and Morello.

Dyehouse—Fruit large and of fine flavor. Resembles Early Richmond, but said to ripen earlier. Hardy.

Empress Eugenie—Large, dark red, juicy, rich. Tree hardy and productive. July.
English Morello—Medium to large, blackish-red; rich acid, juicy and good; very productive and reliable. Is not the old "Common Morello." Very hardy. August. Tree is very dwarf in growth.

Early Richmond—(*Kentish*)—Medium size, dark red; melting, juicy, sprightly, rich acid flavor; very productive, reliable and hardy; valuable. June.

Late Duke—Large, light red; late and fine. Last of July.

Louis Phillippe—Large, dark red, almost black, sprightly, mild acid; stone small. July.

May Duke—Large, dark red; juicy and rich; an old, excellent variety; vigorous and productive. Middle of June.

Montmorency—(*Ordinaire*)—Large and hardy, said to be seven to ten days later than the Richmond. Very productive and valuable.

Olivet—A new, remarkably early cherry; productive, fine quality and the largest of its class. Color, shining deep red; flavor sub-acid; ripens early in June and continues till July.

PLUMS.

A heavy soil, with a considerable mixture of clayey loam, is most suitable for the Plum. It should be planted where the hogs and poultry have free access, as the latter destroy many injurious insects, and the former, in rubbing against the tree, jar it and eat the fallen fruit. Where no hogs are kept, the trees should be jarred once a day, and all fallen fruit at once gathered and destroyed. Mr. Bateham, of Ohio, writes the *Country Gentleman* that by applying sulphur over the trees, in putting it in a bag to a long pole and shaking it over the trees, splendid crops have been realized.

Coe's Golden Drop—Very large; oval, pale yellow; flesh firm, adheres to the stone; very valuable. Last of September.

General Hand—Large, yellow, handsome; freestone. Tree vigorous and productive. September.

German Prune—Large, oblong, purple; juicy and rich; tree very productive; unusually free from the curculio and from knots. September.

Grand Duke—Very large, dark red, fine quality; free from rot. Tree moderate grower. September.

Giant Prune—Largest prune known. Tree strong, handsome grower. Freestone.

Imperial Gage—Large, oval; greenish-yellow, covered with bloom; very juicy and sweet; one of the most valuable varieties. Middle of August.

Lombard—Medium, violet red, juicy, good, hardy and productive. August.

Magnum Bonum—Yellow, one of our largest plums; egg-shaped, very productive; excellent for cooking. Last of August.

Mariana—Seedling of Wild Goose; very handsome and good, exceedingly prolific; an early bearer and free from the ravages of curculio; deep cardinal red, when ripe; thick skin, fine quality.

Niagara—A new, very large red plum. Very productive; flesh deep greenish-yellow. Middle of August.

Prince Engelbert—Dark blue, of good quality; tree a great bearer and a strong grower; a valuable market fruit. Last of August.

Prince of Wales—Round, reddish-purple; tree very hardy and a great bearer. September.

Prunus Simoni—(*Apricot Plum*)—From the Orient and, therefore, not hardy enough to be profitable here. Ripens in July, is brick red, with yellow flesh of an odd flavor. An acquisition further south.

Robinson—Freestone, hardy and vigorous. Prolific bearer; fruit nearly round; color red on a yellowish ground. Fine and sweet.

Shipper's Pride—Said to be an unfailing cropper and a good shipper. Large, round, purple plum of excellent quality.

Shropshire Damson—An English variety. Fruit small, rather obovate; skin purple, covered with thick, blue bloom; flesh melting and juicy, rather tart; separates partially from the stone. Thousands of bushels are annually sold in the market for preserves. With good cultivation it is enormously productive. September. Is not hardy.

Spaulding—Fruit large, yellowish-green, with marbling of a deeper green and a delicate white bloom; flesh pale yellow, exceedingly firm, of sugary sweetness, parting readily from the small stone. Ripens middle of August.

Union Purple—Large, purple, covered with thin bloom; flesh greenish, sweet and good; tree a strong grower. September.

Wild Goose—An improved variety of the Chickasaw, of strong growth and comparatively free from the injuries of curculio; large, bright red, with a gray bloom; juicy, sweet and good; very productive and profitable. Last of July.

Japan Plums.

ABUNDANCE PLUM.

Abundance—Fruit large, showy and beautiful; amber, turning to a bright cherry color; white bloom; flesh light yellow, juicy, tender and very sweet; stone very small. Ripens very early.

Turbank—A good grower; bears when very young; fruit large, cherry red, with lilac bloom; flesh deep yellow and very sweet; very productive; fruit resembles the Abundance, but is about two weeks later.

Ogon—Medium size; yellow, with light bloom; flesh thick, meaty, dry, firm, freestone; excellent for canning. August.

Red June—Fair size, red with handsome bloom ; good quality. Vigorous upright grower. August.

Simoni—(*Apricot Plum*)—Fruit is red, with yellow flesh of an odd flavor. September.

Satsuma—Large, purple and red, with blue bloom ; flesh juicy, firm, dark red, of good quality. Hardy and vigorous grower. August.

Wickson—Handsome ; deep red, covered with white bloom ; small stone. Flesh fine, sugary. Excellent keeper and shipper. August.

Willard—Medium size, red ; very early. Inferior quality ; will keep long time ; tree hardy and vigorous. July.

Plums of Recent Introduction.

Not yet fully tested in this vicinity :

Climax—Very large, heart-shape ; very early ; flesh yellow, sweet ; very free stone ; skin thick, deep red. Tree a vigorous grower.

Sugar Prune—Vigorous grower, very productive ; free stone ; large, yellow flesh ; skin dark purple with thick white bloom when fully ripe. Very early.

PEACHES.

The Peach will succeed best on light, gravelly soil ; with proper cultivation, on almost any soil. Trees one year old from the bud are best suited for planting. The orchard should be kept cultivated, and the trees carefully examined every spring to extract the borers. A shovel full of lime applied at the base of each tree will often be a preventive as well as a fertilizer. The disease called the "Yellows" is incurable ; therefore, if it shows itself on one or two trees these must be cut down at once and burned, which will save the whole orchard. This disease has *never* shown itself in my nurseries ; my trees have always been healthy and have given entire satisfaction.

My stock of Peach trees is quite extensive ; they can be supplied in almost any quantities and on liberal terms.

The following varieties are described in the order of ripening :

First Ripening.

Amsden's June—Fruit good size, delicious flavor ; finely colored red, freestone and very firm. White flesh, excellent quality. First part of July.

Alexander—Very large and highly colored ; handsome, rich and good flavor ; flesh thick and firm ; will carry well long distances ; freestone. First part of July.

Early Canada—Resembles Alexander very closely. Ripens at same time. It is medium size, good quality and handsome appearance. Freestone.

Greensboro—Very large ; color crimson ; flesh white ; freestone. Ripens same time as Alexander.

Shoemaker—Very attractive, yellow color, splashed with crimson ; juicy, sweet and melting ; very hardy ; large size and small stone. Ripens 1st to 15th of July.

Sneed—Medium, white ; excellent quality. The earliest peach known.

Triumph—Fruit good size ; yellow, with crimson cheek. Strong grower, abundant bearer. Ripens with Alexander. The earliest yellow flesh peach.

Waterloo—Medium size ; excellent quality, flesh white, skin greenish-white, purplish-red on side exposed to the sun.

Champion—Fruit large, delicious, sweet, juicy ; best quality of all early varieties. Skin creamy-white, with red cheek ; handsome, hardy and productive and a good shipper. Early August.

Second Ripening.

Early Beatrice—Medium size, marbled red cheek ; flesh melting and very juicy. Good shipping peach ; great bearer. Freestone. Middle of July.

Early Rivers—Large, pale yellow, with pink cheek ; flesh melting, very rich. Freestone. Last of July.

Snow's Orange—A variety which originated near Battle Creek, Mich., and much valued in that state. A very vigorous grower and a productive bearer of large yellow peaches, with red cheeks. Orange colored flesh. Ripens a week earlier than the Barnard's Early.

Third Ripening.

Barnard's Early—A large, yellow peach of good quality. Very popular in the Western States.

Hale's Early—Beautiful peach ; white flesh, of excellent quality when well ripened. Rots in some localities. Freestone. Last of July.

Troth's Early Red—Medium size, skin red ; flesh yellowish-white, juicy, sweet and excellent ; good market peach. Freestone. First of August.

Yellow St. John—Large ; roundish. Orange yellow with deep red cheek ; flesh yellow, juicy, sweet and highly flavored. Freestone. Ripens with Troth's Early.

Mountain Rose—Large, red skin, white flesh ; excellent quality. Freestone. First of August.

George the Fourth—Large, pale-yellowish-white with red cheek ; flesh pale yellowish-white, very juicy and rich ; moderate bearer, of best quality. Freestone. Aug.

Large Early York—(*Honest John*)—Large ; white skin and nearly white flesh ; tender and juicy ; very productive. Freestone. August.

Lewis' Seedling—Resembles Mt. Rose, but said to be superior and more productive.

Foster—Very large and handsome ; very similar to Crawford's Early but ripens a few days earlier ; yellow flesh. Freestone.

Crawford's Early Melacoton—Very large, yellow, with red cheek ; yellow flesh, red at the stone ; very juicy and excellent ; one of the best. Freestone. Middle of August.

New Prolific—Ripens close to Crawfords Early ; pit exceedingly small. Bore heavy crops when all others failed. Very hardy.

Fourth Ripening.

Yellow Rareripe—Large, deep yellow, dotted with red ; flesh yellow, red at the stone, melting, juicy, rich ; excellent vinous flavor. Freestone. Latter part of August.

Conkling—Large and handsome ; golden yellow, marbled with crimson ; flesh pale yellow ; very juicy, sweet. Tree vigorous and yields heavy crops. Ripens last of August.

Crosbey—Medium size, bright yellow, splashed with streaks of carmine : beautiful, constant bearer and very hardy, therefore very reliable. Ripens between Crawford's Early and Late.

Elberta—Very large, yellow, with red cheek, juicy and high flavor ; flesh yellow ; freestone, very profitable, and an excellent shipping variety. Last of August.

Fitzgerald—Fruit large, bright yellow, covered with red ; flesh deep yellow. Best quality. Early September.

Wager—Very large, yellow ; bears uniform and large crops ; juicy and fine flavor. Last of August.

Richmond—Medium to large, yellow mottled with red. flesh yellow, melting, juicy, rich. Freestone. First of September.

Old Mixon Free—Large, yellowish-white, with a dark red cheek ; white, tender flesh ; excellent variety for market. Freestone. First part of September.

Old Mixon Cling—Resembles in quality the Old Mixon Free. It is an excellent clingstone peach. White flesh. September.

Jacque's R. R.—Very large. Surface deep yellow, marbled with red; flesh yellow, juicy, slightly sub-acid. Middle of September.

Kalamazoo—Large, yellow; fine quality. Very productive and profitable. Ripens between Jacque's R. R. and Hill's Chili.

Reeves' Favorite—Large, roundish; yellow flesh, red at the stone, excellent quality, hardy variety. Freestone. September.

Morris White—An old well known variety. Rather large, whitish skin; white flesh to the stone, a little firm, melting, juicy, sweet and rich. In some sections tender and variable in quality. Freestone. Middle of September.

Red Cheek Melacoton—Very large; skin yellow, deep red cheek; flesh yellow, juicy and vinous; very productive; a favorite market fruit. Freestone. September.

Sallie Worrall—Very large, creamy white, shaded and splashed with pale to deep red. Flesh firm, very juicy; begins to ripen last of August. Freestone.

Willets—One of the largest and finest peach; color bright yellow, with red cheek; flesh yellow, juicy. September.

Wheatland—Large to very large; quality best; deep golden yellow; great bearer, excellent shipper. Freestone. Ripens between Crawford's Early and Late.

Fifth Ripening.

Susquehanna—Very large and handsome; rich yellow, with a beautiful red cheek; yellow flesh, melting, rich and fine. Moderate bearer. Freestone. September.

Stump the World—Very large, creamy white with red cheek; white flesh, rich and high flavor; very productive, valuable for marketing. Freestone. September.

Globe—Very large, golden yellow; very fine flavor, ripening during the latter half of September.

Hill's Chili—Large, skin woolly, dull yellow; flesh yellow, very rich and sweet. Productive and hardy. Freestone. Last of September.

Crawford's Late Melacoton—Very large; yellow, with a deep red cheek; yellow flesh, red at the stone; a very excellent variety. Freestone. September.

Fox's Seedling—Large, beautiful red cheek; white flesh, fine quality; good shipper.

Ford's Late—Rather large; white, with crimson cheek; flesh white, juicy and rich. Latter part of September.

Sixth Ripening.

Brandywine—Resembles Crawford's Late and is fully as large. Yellow. Freestone. Ripens a week later than Crawford Late.

Clarissa—A new and very large peach; yellow, fine flavor and appearance. Very valuable on account of its late ripening.

Chair's Choice—Fine yellow freestone; rich in color, splendid flavor, excellent for canning. Ripening with Smock.

Golden Drop—Large, good quality; hardy, profitable; follows Crawford's Late. Esteemed highly in Michigan.

Lemon Free—Of lemon shape, being longer than broad, pointed at apex; color pale yellow; very large; immensely productive. Ripens after Crawford's Late.

Sener—Large, yellow, with deep red cheek; yellow flesh, deep pink around the stone. Freestone, sweet, rich and very juicy. Ripens about October 10th. Highly recommended at the Centennial Exhibition.

Smock—Large, oval; deep yellow with red cheek; flesh yellow, red at the stone, juicy and rich. Freestone. Last of September and early October.

Stephen's Rareripe—Large, resembles Old Mixon's Free, but more highly colored. Very profitable.

Seventh Ripening.

Bilyeu's Late October—Large, white flesh, freestone, with a beautiful blush cheek; flesh rich, juicy and firm. A good shipper. Ripens two weeks later than Smock. Best late peach yet introduced.

Heath Cling—Very large, white, tinged next to the sun, quite downy; flesh white, very juicy, sweet, of a high, rich, excellent flavor. Clingstone. October.

Lord Palmerston—A beautiful large and very late peach. Fruit of a pale color, having a little red on the sunny side; flesh firm and richly flavored.

Salway—Large, yellow, mottled with a red cheek; yellow flesh, very productive; valuable for its late ripening. Freestone. October.

Steadley—A late freestone; ripening ten days after Heath Cling; also said to be larger and of very fine flavor.

Wonderful—Fruit large; rich, yellow, marbled with crimson; flesh yellow, rich, highly flavored; exceedingly firm; parts from the stone perfectly and dry, and is bright red around the pit. Ripens late to very late.

DWARF PEACHES.

Golden Dwarf—(*Van Buren's*)—Medium; skin yellow with a mottled, red cheek; juicy, rich and luscious; bears good crops; grows about 4 feet high; clingstone. September and October.

MULBERRIES.

Downing Everbearing—Fruit black, of good size, but tree not hardy.

Russian—Fruit medium, mostly black; sub-acid to sweet; very productive, perfectly hardy. The original trees were imported from Western Russia.

QUINCES.

Apple or Orange Quince—Fruit large, bright golden yellow; excellent for preserves; very productive. Crooked grower.

Bourgeat—Fine quality; tree vigorous grower; fruit very large, rich golden, smooth; very tender when cooked; excellent keeper. Ripens shortly after Orange.

Champion—A new variety, originating in Connecticut. Tree a prolific and constant bearer. Fruit larger than the Orange, equally as fine, and a longer keeper.

Meech's Prolific—Fruit large and handsome, with a delightful fragrance and delicious flavor; very vigorous and prolific.

APRICOTS.

Breda—Small, round, orange; flesh juicy, rich and vinous; hardy and a good bearer. July to August.

Early Golden—Small, roundish, pale orange; flesh yellow, juicy, sweet and good; vigorous grower and productive. July.

Harris—Fruit large, oval; bright yellow with red blush. Quality best; very juicy and rich. Very productive and very hardy. Ripens about July 20th.

Large Early—Large, oblong; orange, with a red cheek; juicy, rich, sweet; fine flavored. July.

Moorpark—Very large; orange, with a reddish cheek; flesh orange, sweet, juicy, with a fine flavor; a very valuable variety. Beginning of August.

Peach—Very large, yellow; flesh rich, juicy, and high flavored; one of the best, if not the best. Beginning of August

The following are Russian varieties, which are said to be more hardy :

Alexander—Large size, oblong, yellow, dotted with red ; flavor sweet and delicate. One of the best. Ripens first of July.

Alexis—Large to very large, yellow with red cheek ; slightly acid, rich and luscious. Ripens middle of July.

J. L. Budd—Large ; white, with red cheek ; sweet, juicy, extra fine. Ripens first of August.

Gibb—Medium size, yellow, sub-acid, rich, juicy ; ripens latter part of June. The best early sort, ripening with the strawberry.

Nicholas—Medium to large ; white, sweet, melting. Middle of July.

NECTARINES.

(A Variety of the Peach, with a smooth skin.)

Boston—Large ; light yellow, with a red cheek ; flesh yellow, sweet and pleasant. First of September.

Downton—Large, pale green, with a red cheek ; melting, rich, excellent. Last of August.

Early Newington—Large ; pale green, nearly covered with blotches of red ; juicy, rich and sweet ; probably the best clingstone nectarine.

Elruge—Medium size ; pale green, covered with purplish red, juicy and very rich. August to September.

NUTS.

Of these are generally in stock :

Hard and Soft Shelled Almonds.

American Sweet Chestnuts—The fruit of this is too well known to need describing. As an ornamental or shade tree, it is excellent.

Paragon Chestnut—A large nut of excellent quality ; hardy and productive.

Japan Chestnut—Larger than the American ; sweet, very prolific, and commences to bear early.

Spanish Chestnut—The nuts are larger, but not as sweet. The tree does not grow quite as rapid as the American.

English Walnuts—The nuts are well known, being mostly imported. The tree not being entirely hardy, grows slow, and is not as productive here as in Europe.

Black Walnut—Is also too well known to need a description.

Filbert, English or Hazelnut—Larger and better than the American, where it succeeds.

GRAPES.

There are many varieties of grapes not mentioned here, but which could be furnished. The list of varieties is so large that I mention only a few of the most important kinds.

Agawam—Berries very large ; thick skin ; pulp sweet. Ripens early.

Brighton—A cross of Concord and Diana Hamburg ; hardy, berries resemble the Catawba ; ripens same time as Hartford Prolific. Very productive where it does well.

Clinton—Bunch large ; berry small, black, covered with a blue bloom ; juicy, sweet and excellent, very productive and reliable ; does not mildew ; makes excellent wine.

Concord—A well known standard variety ; bunch and berry large ; black, covered with a blue bloom ; juicy, sweet and excellent ; very reliable, does not mildew ; quite early ; good for the table and making wine.

Delaware - Bunch small to medium, compact ; berries below medium, of beautiful red or purplish maroon color, covered with a thin whitish bloom ; thin skin ; pulp sweet and tender, very juicy ; quality best for table and for wine. Hardy ; mildews in some localities, often produced by overbearing. A very poor grower.

Eaton—Berries very large, black, covered with thick bloom ; bunch large and compact ; thick skin, very juicy. Highly commended.

Elvira—Bunch medium ; very compact ; berry medium, round, pale green, with white bloom, sometimes tinged with red streaks when fully ripe ; very thin skin, ripens ten days later than the Concord ; very productive, vigorous grower, exceedingly healthy and hardy ; excellent for white wine.

Empire State—A seedling of Hartford Prolific and Clinton ; therefore purely native. Berry medium to large ; white, with a slight tinge of yellow, covered with bloom ; tender, juicy, sweet. Ripens with Hartford.

Lutie—Originated in Tennessee. Berry red, good size, of good quality ; rather foxy. Vine is a very strong grower, and has healthy foliage. Not so liable to mildew as the finer sorts, and therefore more regular bearer.

Martha—Most popular among the old white varieties ; bunch and berry medium ; thin skin, greenish-white, sometimes with an amber tinge ; very healthy, hardy and productive ; ripens a few days earlier than the Concord. Does not mildew.

Moore's Early—Bunch and berry large, round ; very hardy and entirely exempt from mildew ; early ; very desirable. Resembles Concord in its excellent qualities, but ripens before Hartford Prolific.

Moore's Diamond—Bunch large ; berry medium. Color yellowish-green when fully ripe. Quality very good.

Niagara—Berry greenish-white, large, skin thin, but does not crack ; good quality and productive. Hardy. Bunch compact.

Pocklington—A seedling of the Concord, raised by Mr. John Pocklington, of Sand Hill, N. Y. The vine is a strong grower and hardy, identical with the Concord, having large, thick foliage, and like that variety, never mildews. Fruit large, light golden-yellow color ; bunches very large, often shouldered ; berries round and thickly set on the bunch. Ripens with Concord. This variety and the Lutie have produced fruit when other varieties have failed.

Salem—Berries large, dark copper color ; thin skin, very sweet. Ripens first of September.

Woodruff Red—A seedling of Concord. Large red berry of indifferent quality. Good grower, healthy foliage. May do well in localities where finer grapes mildew.

Worden's Seedling—A handsome, large black grape. It is larger, of a better quality, and earlier than the Concord.

BLACKBERRIES.

I have other varieties of blackberries not mentioned here, but mention only a few of the most important kinds.

Plant in rows six feet apart, four feet apart in the rows. An annual dressing of manure will prove very profitable.

Erie—Very large, hardy, very early and very productive. Of excellent quality handsome and firm.

Kittatinny—Very large, slightly conical. The berries are firm, of sweet, excellent flavor, and are perfectly ripe as soon as they turn black. It is a vigorous grower, hardy and very productive; continues four or five weeks bearing. The best blackberry for general cultivation.

Snyder—Very hardy and very productive; medium size; no hard, sour core; canes not as thorny as those of Lawton or Kittatinny.

Taylor—Hardy and productive. Berries large and fine flavor. Season medium.

Wilson's Early—Large, oval, pointed; flavor rich and good; ripens very early, and matures the whole crop in two weeks.

DEWBERRY.

Lucretia—A trailing blackberry, the fruit of which is said to be fine and luscious. It ripens earlier than the other blackberries.

RASPBERRIES.

There are many varieties of raspberries not mentioned here, but which could be furnished. The list of varieties is so large that I mention only a few of the most important kinds.

Plant in rows five or six feet apart, four feet apart in the rows. Remove all the old canes as soon as the fruit is gone, and do not allow more than three or four new ones to each hill.

Cuthbert—A strong, hardy variety; berries large, rich crimson and of a good flavor.

Gregg—Recently introduced from Ohio; ripens with Mammoth Cluster, but larger, more productive and of finer quality. The best black variety.

Golden Queen—Large, yellow and firm. Very productive and hardy.

Japanese Raspberry—(*Wineberry*)—Berry round, deep red, medium size; fairly firm, grow in clusters; each berry is enveloped by a large calyx, which gradually opens and exposes the fruit.

GOOSEBERRIES.

Triumph—The fruit is very large, of yellowish-green color. The original plants, which have fruited for more than ten years, have never mildewed, and prove exceedingly productive.

Downing—Upright, vigorous growing plant; very productive; fruit somewhat larger than Houghton, oval; whitish-green, skin smooth; flesh soft and juicy, very good; excellent for family use.

Houghton's Seedling—A hardy American variety; free from mildew and enormously productive. Berries small and reddish.

Industry—An English variety; fine large red berries. Will mildew almost as easily as other English varieties.

STRAWBERRIES.

To cultivate the strawberry for family use, we recommend planting in stools two or three feet apart, and to keep all the runners off. By this treatment the fruit will be superior in size, as well as in flavor.

Strawberry plants generally do better planted in the Spring, at any time before they are in blossom. If planted early in the Fall, the plants generally suffer from want of rain; and if planted late in the Fall, the plants will not become sufficiently established to withstand the Winter.

Of the long list of varieties now introduced, the following have proven to be the most valuable for general cultivation:

Crescent Seedling—Very productive; good quality, fair size, good color and solid flesh.

Bubach (No. 5)—Large and handsome; bright scarlet, moderately firm. This is a very profitable variety.

Haverland—Fruit large, excellent flavor, and bright red color; ripening evenly and early. Exceedingly productive. One of the best.

Sharpless—Very large; excellent quality; great productiveness, firmness of fruit and vigor of plant all combined.

Other varieties can be furnished on application.

CURRENTS.

These can be profitably grown, planted between fruit trees, when the latter are so young as not to shade the ground too much.

Black Naples—A large, productive, black currant

Cherry—The largest of all currants; bunch short, berries very large, deep red, acid.

Fay's Prolific—Red; very productive, and from its peculiar stem, inexpensive to pick.

La Versailles—A French variety; bunches and berries very large; very productive; one of the most desirable varieties.

White Grape—Bunch and berry very large; white-yellow, transparent; a spreading, irregular grower; the best white currant in cultivation; very productive.

ASPARAGUS.

The soil should be manured with a very heavy coat, and ploughed or dug into the ground, making a deep rich soil. The roots should be planted 4 to 6 inches deep, three feet apart each way.

Conover's Colossal—A very popular, well-known variety; large and tender.

Barr's Mammoth—A variety, which is gaining in favor in the Philadelphia markets, being very large and very productive. Preferable to Conover's Colossal.

Palmetto—A very early variety of excellent quality.

RHUBARB.

To grow good strong stalks, the soil should be rich and deep; the roots should be planted three feet apart each way. The stalks will be fit for use the second season after planting.

ORNAMENTAL DEPARTMENT.

NORWAY MAPLE.

DECIDUOUS TREES.

Of the following Ornamental Trees I can furnish medium to extra size trees at proportionate prices.

Alder. (*Alnus.*)

European. (*A. glutinosa.*) A rapid growing tree of nice shape. Foliage roundish, wedge shaped and wavy. Makes a nice shade or street tree.

Ash. (*Fraxinus.*)

American White—(*F. Americana.*) A native tree of large size, rapid growth and easy cultivation; leaves pinnate, pale-green and handsome.

All the Ash varieties must be carefully examined annually, at the base of the tree, to kill the borer, which often attacks it in April or May.

Beech. (*Fagus.*)

American—(*F. ferruginea.*) A large native tree, with smooth bark, horizontal, spreading branches and coarsely-toothed foliage.

Cut-Leaved—(*F. laciniata*) Of medium growth, cone shaped and compact; presents a peculiar, airy outline from its small, cut-leaved foliage. Very choice.

European—(*F. sylvatica.*) A native of Europe; foliage larger and more compact than the preceding; grows very large.

Purple-Leaved—(*F. purpurea.*) A beautiful lawn tree, on account of its rich, purple foliage; does not grow very large, and contrasts beautifully with the green foliage of other trees.

Weeping—(*F. s. pendula.*) The finest large tree of drooping habit. Ought to be more extensively introduced.

Birch. (*Betula.*)

Weeping or White—(*B. alba.*) A very ornamental tree, with silvery-white bark and fine foliage; its branches droop.

Weeping Cut-Leaved—(*B. urticæfolia.*) The habit is very much of the former; the foliage presents a finer appearance, being more deeply cut and fern-like. It does better in Northern states.

Buttonwood, or Planetree. (*Platanus.*)

Oriental Planetree—(*P. orientalis.*) A rapid grower, leaves more deeply cut than the common buttonwood.

Catalpa, or Indian Bean. (*Catalpa.*)

Hardy—(*C. speciosa.*) An upright, rapid grower, trees being straight and tall. Having withstood the severe winters of the Northern States, there can be no doubt as to its hardiness.

Chestnut. (*Castanea.*)

American Sweet—(*C. vesca Americana.*) A native tree, well-known. Its nuts are smaller but much sweeter and better flavored than the European species.

Japan—Fruit large, tree a slow grower, but commences to bear when very young.

Paragon—Fruit very large, sweet and rich. Tree a good grower and an early and abundant bearer.

Spanish Chestnut—(*Castanea vesca.*) The nuts are larger than the American, but not as sweet.

Cherry. (*Cerasus.*)

Double Flowering—Pretty double white flowers; large growing, ornamental shade tree.

CAROLINA POPLAR.

Cypress. (*Taxodium.*)

Deciduous—(*T. distichum.*) A most beautiful small growing tree, with delicate pale green, fine foliage, similar to an evergreen; handsome in groups or planted singly.

Weeping Deciduous—(*T. distichum pendula.*) Foliage like the above, but the branches are drooping. This is new and of great promise.

Chinese Weeping Deciduous—(*Glyptostrobus sinensis pendulis.*) From China and Japan; a small tree of an upright conical shape, with the young branchlets all drooping. The foliage is exceedingly graceful and delicate.

Dogwood. (*Cornus.*)

White Flowering—(*C. Florida.*) Very ornamental; ought to be more appreciated; of fine form and beautiful foliage; produces white flowers early in the Spring.

Red—With blood red bark; very conspicuous in Winter. Grows in shrub form.

Weeping Dogwood—A variety of *C. Florida*, with branches drooping decidedly. Very ornamental smallish tree.

Elm. (*Ulmus.*)

American White or Weeping—(*U. Americana alba.*) The noble, graceful and drooping tree of our own forest.

Scotch—(*U. Montana.*) Also called Wych Elm, a fine spreading tree, of rapid growth and large foliage.

Ginko Tree. See Maiden Hair Tree.

Hazelnut, or Filbert. (*Corylus.*)

Common—(*C. avellana.*) See under nuts.

Horse-Chestnut. (*Æsculus.*)

English—(*Æ. hippocastanum.*) A hardy, healthy tree, free from diseases; bears white flowers, spotted with purple and yellow; makes a very dense shade; grows slow.

Dwarf—(*Æ. parviflora.*) From our Southern States, but hardy here. A large shrub, with numerous panicles of pure white flowers, blooming in May.

Judas Tree. (*Cercis.*)

American—(*C. Canadensis.*) A small crooked growing tree; covered with delicate pink flowers before the leaves appear.

Laburnum. (*Cytisus.*)

Golden Chain—Bears long pendant racemes of yellow flowers in June, showy and beautiful. An elegant tree.

Larch. (*Larix.*)

European—(*L. Europea.*) An elegant, rapid growing, pyramidal tree; also valuable for timber; small branches, drooping.

Linden. (*Tilia.*)

European—(*T. Europea.*) A very fine pyramidal tree, with large leaves and fragrant flowers; desirable on large grounds. Young trees are not so smooth and straight as the American.

American or Basswood—(*T. Americana.*) A rapid growing, beautiful native tree, with very large leaves and fragrant flowers.

Silver—(*T. alba*) A vigorous growing tree of medium size and pyramidal form. Leaves downy white beneath and smooth above.

Weeping—(*T. alba pendula.*) A charming lawn tree, with very graceful, drooping branches and downy white leaves. It is rapid in growth, entirely hardy and very conspicuous in a collection.

Maiden Hair Tree. (*Salisburia.*)

Ginko-tree—(*S. adiantifolia.*) A rare and beautiful tree, with remarkable fan-like foliage. A native of Japan; it thrives well here.

Magnolia.

Sweet Bay, or Swamp Magnolia—(*Glauca*.) A small growing tree; flowers deliciously fragrant, cup-shaped, and pure white. An American variety.

Large-Leaved—(*Macrophylla*.) A medium sized tree, with very large leaves, 1 to 2 feet long; flowers very large, pure white and fragrant. A rare American variety.

Umbrella—(*Tripetala*.) A medium sized tree of rapid growth; large leaves and large cream-white flowers. An American variety.

Yulan—(*Conspicua*.) A medium sized tree; flowers of fair size, pure white, fragrant, and opening before the leaves appear. An Asiatic variety.

Slender Growing—(*Gracilis*.) A large shrub; flowers cup shaped, dark purple without and white within.

Purple Flowering—(*Purpurea*.) Darker and shorter leaves than the preceding; flowers are outside dark purple, shaded to white at the apex, and inside white; a very desirable shrub.

Cucumber Tree—(*Acuminata*.) Fruit resembles, before ripe, a small cucumber; beautiful, regular conical shape, glossy leaves flowers medium size, greenish-yellow, bell shaped. An American variety, of rapid growth, reaching the height of 60 or 70 feet.

Soulang's—(*Soulangiana*.) A hybrid between *M. purpurea* and *M. acuminata*; flowers purple and white; very handsome.

Maple. (*Acer*.)

WEIR'S CUT-LEAVED MAPLE.

Ash-Leaved—(*A. Negundo*.) Box Elder. A fine, rapid growing variety, with handsome light-green foliage and spreading head; very hardy. Desirable for shade tree.

Norway—(*A. platanoides*.) One of the most valuable ornamental trees for the street and lawn; rich, dark-green foliage, compact growth, free from insects and diseases; a splendid shade tree.

Schwedler's Norway Maple—(*A. p. Schwedleri*.) Has purple leaves; considered to be the best purple variety. New.

Red, or Swamp—(*A. Rubrum*.) A native tree, medium size; the foliage turning in the fall to various tints of yellow and red. A good street tree.

Sugar, or Rock—(*A. saccharinum*.) A very popular American tree and for its stately form and fine foliage, justly ranks among the very best, both for the lawn or avenue. Leaves turn golden-yellow in the fall.

Sycamore—(*A. pseudo platanus*.) A handsome, rapid growing tree; rich dark foliage.

Purple-Leaved Sycamore—Leaves dark-green on the upper surface and purplish-red underneath. A good grower.

Silver-Leaved—(*A. dasycarpum*.) Of exceedingly rapid growth, and desirable for immediate effect. A large shade tree.

Weir's Cut Leaved Silver—(*A. d. Weirii laciniatum*.) A weeping, graceful, silver maple, with leaves deeply cut. One of the best.

Mountain Ash. (*Sorbus*.)

European—(*S. aucuparia*.) A fine hardy tree, head dense and regular, covered from July till winter with large clusters of bright scarlet berries.

Oak-Leaved—(*S. aucuparia quercifolia*.) The leaves are of a downy white color underneath, and deeply toothed on the margins; hardy and fine.

Weeping—(*S. aucuparia pendula*.) A beautiful tree with straggling, weeping branches; makes a fine tree for the lawn; suitable for covering arbors.

All varieties of the Mountain Ash are liable to be attacked by the *boyer*; an annual examination at the base of the trunk of the tree is advisable.

Mulberry. (*Morus*.)

White—(*M. alba*.) A smallish tree, from China; of rapid growth. Fruit cream-white.

Russian—(*M. Tartarica*.) A good-sized tree, bearing black fruit.

Teas' Weeping—(*M. pendula*.) Forms an umbrella-shaped head with long slender branches drooping to the ground. Perfectly hardy.

Oak. (*Quercus*.)

Pin Oak—(*Q. palustris*.) Foliage deep-green, finely divided; when old it acquires a drooping form.

Red Oak—(*Q. rubra*.) Is a variety of rapid growth compared with some other varieties. The leaves turn red in the fall.

The Scarlet Oak—(*Q. coccinea*.) Is very much like the red.

Golden—(*Q. concordia*.) A superb variety, with orange yellow leaves, which retain their color throughout the summer. New and rare. The contrast of its foliage with green varieties is very striking.

White—(*Q. alba*.) One of the finest American trees; of large size and spreading branches. Leaves lobed, pale green above and glaucous beneath.

Peach. (*Persica*.)

White Double-Flowering—Very ornamental.

Double-Flowering—Pink.

Double-Flowering—Scarlet.

Poplar. (*Populus.*)

Cottonwood, or Carolina—(*P. angulata*) Branches acutely angular or winged; leaves very large, heart-shaped, shining; grows rapidly.

Lombardy—(*P. dilatata*.) A very fast and high growing, pyramidal-shaped tree; creates marked effect in large groups.

KILMARNOCK WEEPING WILLOW.

Strawberry Tree. (*Euonymus.*)

European Burning Bush—(*F. Europeanus*) A native, very ornamental shrub of Europe; has brilliant rose-colored berries, which hang in clusters from the branches until mid-winter. Planted with evergreens the contrast is very fine.

Sweet Gum. (*Liquidamber styraciflua.*)

A beautiful street tree, with large, glossy leaves, resembling the Maples, turning deep crimson in the fall.

Tulip Tree. (*Liriodendron.*)

White Wood—erroneously—Yellow Poplar. (*L. tulipifera.*) One of our most beautiful native trees, of tall, stately growth, with large, smooth, shining leaves; greenish-yellow flowers, tulip shaped.

Willow. (*Salix.*)

Kilmarnock Weeping—(*S. caprea pendula.*) A variety of the Goat Willow: an exceedingly graceful little tree very hardy. Sometimes called "Umbrella Tree."

Babylonian Weeping—(*S. Babylonica.*) The well-known Weeping Willow. Beautiful, and valuable for watery scenery and low grounds.

Salamoni Willow—More vigorous and upright than the former, retaining, however, its weeping habit. From France.

New American Weeping—(*S. Americana pendula.*) An American, small, slender branched tree; very ornamental.

Rigida Pendula—This is a fine weeping tree when grafted 5 to 6 feet high; branches are long and slender, the leaves glossy, pale green, and hang to the tree longer in the fall than the Kilmarnock.

Rosemary-Leaved—(*S. rosmarinifolia.*) A shrub: native of this country, with lanceolate, silky leaves. Grown also as a tree by grafting.

Royal Willow—(*S. regalis.*) A fine tree, with rich, silvery foliage.

White Fringe. (*Chionanthus.*)

Virginica—(*C. Virginica.*) One of the best large shrubs or small trees; has superb foliage and delicate, fringe-like, greenish-white flowers. June.

EVERGREEN TREES.

Arbor Vitæ. (*Thuja.*)

American—(*T. occidentalis.*) Excellent for screens and hedges.

Globe—(*T. Globosa.*) A favorite dwarf; globular dense bush; makes fine low hedges.

Golden—(*T. aurea.*) A splendid variety of a yellowish tint.

Hovey's Golden—A dwarf seedling of the American, having a golden tint in the spring and bright green in the summer.

Parson's Dwarf—(*T. compacta.*) Remarkable for its compact growth; dwarf, with bright-green foliage one of the very best dwarf Arbor Vitæ. Very suitable for hedges around cemetery lots.

Geo. Peabody—Of dwarf, compact growth, foliage bright-golden color, which it retains all summer. The best golden variety.

Pyramidal—(*T. pyramidalis.*) Is remarkably erect; dark green, compact and very desirable.

Rollinson's Golden—(*T. elegantissima.*) An upright grower, having a rich golden hue; very conspicuous.

Siberian—(*T. Siberica.*) Maintains its dark-green color in winter; is very hardy, compact and pyramidal in growth.

Tom Thumb—A dwarfish variety, very useful for small evergreen hedges in lawns and cemeteries.

Fir. (*Picea*.)

Balsam—(*P. balsamifera*.) A well known American evergreen, pyramidal in form, with deep green foliage; an erect, rapid grower. Beautiful; makes a fine Christmas tree.

European Silver—(*P. pectinata*.) A fine tree, resembles the Balsam Fir, but has more horizontal branches and more silvery foliage. It is superior to the Balsam Fir.

Juniper. (*Juniperus*.)

Irish—(*J. hibernica*.) Very erect and tapering in its growth, forming a column of deep green foliage—a pretty and distinct evergreen, which for its beauty and hardiness is a general favorite. Very suitable for small yards and cemetery lots.

Swedish—(*J. suecica*.) Similar to the Irish, though not so erect; has bluish-green foliage, and forms a handsome, pyramidal small tree.

Trailing—(*J. squamata*.) A beautiful trailing plant.

Canadian Trailing—A native variety of very dense and silvery foliage; prettier than the above.

Golden Trailing—Grows like the preceding variety, but its foliage has a decided deep golden tinge.

Pines. (*Pinus*.)

Austrian, or Black—(*P. austriaca*.) A very remarkable robust, hardy, spreading tree—leaves long, stiff, and dark green—growth rapid, valuable for this country.

Dwarf—(*P. Mugho*.) A low, spreading, curious species, attaining only the size of a bush. Foliage similar to that of the Scotch.

Scotch—(*P. Sylvestris*.) A fine, robust, rapid-growing tree, with stout erect shoots, and silvery-green foliage.

White—(*P. Strobus*.) The most ornamental of all our native pines. Foliage light, delicate and silvery-green. Flourishes in the poorest soils.

Retinospora. (*Japan Cypress*.)

Compacta—New, beautiful green during the whole year, branches erect and grows compact.

Obtusa—A beautiful, hardy variety; grows from 60 to 80 feet high, with graceful, drooping branches. Leaves glossy green above, silvery-white bands beneath.

Filifera—(*Fernlike*.) Delicate, slender branches. Very striking and graceful. Perfectly hardy.

Pisifera aurea—(*Golden Pea-Fruited*.) A golden variety, which is new and very desirable.

Gracilis—Dwarfish, fan like branchlets at the end of branches. Very picturesque in its growth.

Plumosa aurea—(*Golden*.) One of the most striking and desirable plants for this climate: tips of branches of a bright golden hue; it is entirely hardy and preserves its color well. Beautiful.

Plumosa—Compact, bright green, entirely hardy. Very pretty.

Plumosa Argentea—Soft, silvery, pale-green foliage.

Squarrosa Veitchii—A heath-leaved form of this class. Resembles the *Thuja Ericoides*, but is hardier than the latter. Handsome.

Spruce. (*Abies*.)

Hemlock, or Weeping—(*A. canadensis*.) An elegant pyramidal tree with drooping branches and delicate, dark foliage, like that of the Yew. Distinct from all other trees. It is a beautiful lawn tree, and makes a highly ornamental hedge.

Norway (*A. excelsa*.) A lofty, elegant tree of perfect pyramidal habit; remarkably elegant and rich, and, when old, has fine, pendulous branches. It is exceedingly picturesque and beautiful. Thousands are sold for Christmas trees.

Oriental Spruce—From the shores of the Black Sea. A beautiful tree, compact and slender foliage.

White American—(*A. alba*.) A medium-sized native tree, of *compact growth*, regular conical shape, light green color; entirely hardy and succeeds in most situations. A beautiful tree.

Colorado Blue Spruce—A beautiful Spruce from the Rocky Mountains; its light blue needles in the early part of summer are very striking and contrast beautifully with dark green evergreens.

DECIDUOUS SHRUBS.

Althea, or Rose of Sharon. (*Hibiscus*.)

Valuable, late blooming shrubs of easy cultivation. Very desirable, as they bloom in August and September, when few other shrubs are in bloom. Make very ornamental hedges.

TREE ALTHEA.

Bicolor—(*H. syriacus bicolor*.) Double white, with red stripes.

Double Red—(*H. syriacus rubra pleno*.) Showy, double red flowers.

Double Purple—(*H. syriacus purpurea flore pleno*.) Fine, double purple flowers.

Double White—(*H. syriacus alba pleno.*) Fine, double, pure white flowers.

Jeanne d'Arc—(*H. syriacus Jeanne d'Arc.*) Very double, pure white flowers.

Yellow—(*H. syriacus Luteo pleno.*) Very light yellow flowers. Blooms very early.

Single White—(*H. syriacus totus albus.*) Pure white single flowers. Fine.

Variiegated-leaved—(*H. syriacus flore pleno foliis variegata.*) Foliage finely marked with light yellow. Produces purple flowers. One of the finest variegated shrubs.

Tree Altheas—Very pretty. From a distance they look like little trees full of roses. Very recommendable.

Almond. (*Amygdalus.*)

Dwarf Double Flowering—(*A. punila fl. pl.*) Blooms in May very profusely, the whole bush being literally covered with flowers. There are double pink and white varieties, both exceedingly beautiful.

Amorpha. (*Bastard Indigo.*)

Fine large shrubs with small flowers in terminal panicles.

Fragrans—Fragrant, dark purple flowers. Blooms in June and July.

Azalea.

Mollis—Hardy species from Japan; flowers of various colors, large and showy.

Berberry. (*Berberis.*)

Purple—(*B. vulg. purpurea.*) An upright, thorny shrub, having dark purple leaves. Planted among other shrubbery it is in striking and beautiful contrast. Flowers in May or June,

Thunberg's Berberry—(*B. Thunbergii.*) A pretty Japan species, dwarf habit; small leaves which change to a beautiful red in the fall.

Colutea. (*Bladder Senna.*)

Colutea arborescens—(*Tree Colutea.*) A large shrub with small, delicate foliage and yellow pea-shaped flowers in June, followed by reddish pods or bladders. Native of South Europe.

Currant. (*Ribes.*)

Yellow Flowering—(*R. aureum.*) A native shrub with yellow flowers; also called the "Missouri Currant. Flowers in May.

Deutzia. (*Deutzia.*)

Showy shrubs of highest ornamental merit, and adapted to all good soils.

Deutzia crenata—(*Scalloped-leaved.*) From Japan; thrives well here and has drooping, white, bell-shaped flowers. June.

Deutzia crenata flore pleno—(*Double flowering.*) Flowers double, with pink margins. Very nice for bouquets.

Deutzia candidissima—(*Double white flowering.*) Pure white flowers. Very pretty.

Deutzia, Pride of Rochester—Large, double white flowers; the back of the petals are slightly tinged with pink.

Deutzia gracilis—(*Slender-branched.*) A species introduced from Japan, and entirely hardy. The flowers are pure white, graceful and delicate, and well suited for bouquets, therefore often used by florists. June.

Deutzia scabra—(*Rough-leaved.*) A beautiful shrub, with profuse, white, drooping flowers. June.

Dogwood. (*Cornus.*)

Red-Branched—(*C. Sanguinea.*) Has blood red bark, is very conspicuous in winter; blooms in May.

White—(*C. florida.*) See Deciduous Trees.

Variiegated-Leaved—Leaves beautifully variegated with white, making it a very attractive and desirable variety.

Golden Variiegated-Leaved—(*C. Spathi.*) Same as former variety, only variegated with yellow. New.

C. Mascula—(*Cornelian Cherry.*) A large growing shrub, producing clusters of bright-yellow flowers in early spring, before the leaves appear.

Elaeagnus.

E. Longipes—A dwarf-growing shrub of spreading habit. The leaves are silvery beneath, the flowers are bright yellow, fragrant.

Elder. (*Sambucus.*)

Golden-Leaved—(*S. aurea.*) Has very bright, golden-yellow leaves. A valuable plant for enlivening shrubberies.

Cut-Leaved—(*S. racemosa plumosa.*) Leaves fine, beautifully cut and drooping, giving the plant a unique and pretty effect.

Exochorda.

E. grandiflora—A very desirable shrub with large white flowers in May, making it very attractive. One of the finest shrubs.

Filbert. (*Corylus.*)

English Filbert—See under "Nuts."

Purple-Leaved—Is very conspicuous on account of its large purple leaves. Makes a nice shrub.

Cut-Leaved—Leaves are deeply cut, which produces a very ornamental appearance.

Forsythia. (*Golden Bell.*)

F. Fortuni—(*Fortunes Forsythia.*) An upright grower, deep-green leaves and yellow flowers.

F. Viridissima—Very green. The most common, yet one of the best of this class. It is one of the first to bloom in early spring, flowering profusely bright-yellow, before the leaves appear.

F. Suspensa—(*Weeping Forsythia.*) Flowers and foliage like the former, but the branches curve towards the ground.

F. variegata Aurea—A fine novelty. The leaves have a yellow margin. Does well in the sun. A vigorous grower.

Halesia. (*Silver Bell.*)

H. tetraptera—Broad, light-green foliage, pretty white bell-shaped flowers. May. Makes a large bush. Very desirable.

Honeysuckle, Upright. (*Lonicera.*)

White—(*L. Tartarica alba.*) Nearly pure white flowers. May.

Yellow, or Fly Honeysuckle—(*L. Xylosteum.*) Small, cream-colored flowers. May.

Large Flowering—(*L. grandiflora.*) Flowers very numerous, of red color. May.

Hypericum. (*St. John's Wort.*)

H. prolificum—Has deep-green foliage and bears medium-sized yellow flowers profusely. Very showy.

Hydrangea.

Paniculata—(*H. paniculata grandiflora.*) Flowers in large panicles, pure white; the plant is entirely hardy. Blooms from early August till frost.

Tree Hydrangea—Same flower and foliage as the bush Hydrangea, but plants are trained to tree shape, having a stem about three feet with bushy heads.

Kerria.

Kerria Japonica—A good sized shrub, bearing globular, yellow flowers, from July to October.

Silver Variegated-Leaved—A dwarf variety from Japan, having small green leaves edged with white; very slender grower; exceedingly pretty and a valuable dwarf shrub.

Lilac. (*Syringa.*)

Beautiful Shrubs which flower in May.

Common Purple—(*S. vulgaris.*) Well known shrub; purple, fragrant flowers. Flowers in May.

Common White—(*S. alba*.) Like the preceding, except in flowers, which are white. Blooms in May.

HYDRANGEA.

Persian Purple—(*S. Persica*.) Beautiful; one of the best. May.

Persian White—(*S. persica alba*.) Delicate, nearly white. Fragrant flowers.

Japan—(*S. japonica*.) New, from Japan, bearing creamy-white, odorless flowers, in large panicles. A month later than other lilacs. Will grow to a good-sized tree.

Madam Lemoine—Large panicles of compact, double flowers, of pure white color; very good for forcing; highly recommended.

Marie Legraye—Large panicles of single white flowers; very valuable for forcing; one of the best white varieties.

Villosa—Another new Japan variety; flower buds are pink, but white when open. Leaves resemble those of White Fringe. Valuable on account of being two weeks later than other lilacs. It is very profuse flowering.

President Grevy—A beautiful, purplish-violet variety, of very large, double flowers, in very large panicles. One of the best. New.

Souvenir de L. Spath—New. Very large flowers, of bright scarlet color, not only in bud, but also when flowers are open.

Virginite—Large, double flowers, pinkish flesh color, shade of the "Souvenir de la Malmaison" rose. New.

Mist Tree.

Purple Mist. or Smoke Tree—(*Rhus Cotinus*.) A large growing shrub-like tree, bearing purplish, mist like flowers, very unlike any other shrub, and is, therefore, very striking. June and July.

Crimson-Purple Fringe—(*R. cotinus atropurpureus*.) This is new and therefore not so well known. The flowers are more reddish-purple, and more distinct than the former.

Mock Orange, or Syringa. (*Philadelphus*.)

P. Dianthiflorus—A dwarf variety, with cream-colored, fragrant flowers.

P. flore pleno—(*Double flowering*.) The flowers are partially double and very fragrant.

P. nana—(*Dwarf Mock Orange*.) This is a low growing shrub, and therefore valuable when planting clumps. Flowers very little.

P. Foliis aureis—(*Golden-Leaved M.*) A medium-sized shrub, having yellow foliage, which keep their color well.

P. grandiflorus—(*Large flowering M.*) A large shrub, bearing white, fragrant flowers profusely. June.

P. roseiflorus plenus—Large, double white flowers.

P. coronarius—(*Sweet scented M.*) This is the well known sweet scented variety, which bears profusely sweet scented white flowers. More fragrant than the others. June.

Plum. (*Prunus*.)

Double-Flowering—(*P. tribola*.) Of recent introduction from China; has pretty, semi-double, pink flowers, closely set along the branches, forming compact spike. Blooms in May.

Purple-Leaved—(*P. Pissardi*.) Purple leaves, retaining its color all season; very pretty. Flowers small, white, single.

Privet. (*Ligustrum*.)

California—(*L. ovalifolium*.) Nearly evergreen, strong growing shrub with bright green, medium-sized leaves; white flowers in June. Very ornamental. The best of all Privets.

Variiegated-Leaf—Foliage is marked with yellow; makes a pretty hedge, differing in color from the green varieties.

Quince, Japan. (*Cydonia*.)

Red-Flowering—(*C. japonica*.) An old and esteemed variety, having a profusion of bright, scarlet flowers in early spring; one of the best hardy shrubs we have. Makes a beautiful and useful hedge. May.

Rhodotyus.

Rhodotyus Kerrioides—A Japan shrub, very ornamental, of medium size, with large single white flowers the latter part of May, succeeded by numerous small fruits.

Snowball. (*Viburnum.*)

JAPAN SNOWBALL.

Opulus—A well-known, favorite shrub, of large size, with globular clusters of white flowers, blooming early in June.

Japan—(*V. plicatum*.) A rare and exceedingly beautiful species; flowers pure white, in very large, globular heads.

Spirea. (*Meadow Sweet*.)

These shrubs are of easy culture, and graceful bloomers, the different varieties flowering during most of the summer.

S. Anthony Waterer—A very valuable dwarf-growing kind, making a compact bush with a mass of crimson flowers, and as it flowers when the early flowers have gone, it is very conspicuous and very desirable.

S. Billardi—(*Billard's Spirea*.) This bears spikes of pink flowers. Very robust grower.

S. Bumalda—This is very similar to Anthony Waterer, but is a stronger grower, and the flowers are not quite as deep crimson.

S. callosa—(*Fortune's Spirea*.) An upright grower; flowers in superb panicles of bright red color.

S. callosa alba—A low, broad compact bush, flowers dull white in corymbs three inches in diameter. Blooms most of the season.

S. callosa rosea—Same as before, only with rosy, pink flowers.

S. atrosanguinea—Similar to *Spirea callosa*; flowers a shade darker.

S. Crispifolia—From Japan. A very dwarf variety, with crisp curled leaves and very small pink flowers. Rare.

S. Fortunii Macrophylla—The reddish color of the new growth of its branches makes it very conspicuous. It is a robust grower, leaves large and flowers are red. Very desirable.

S. opulifolia aurea—The golden-leaved *Spirea*. It is so called on account of its yellow foliage, which is very striking, particularly so in the early spring.

S. prunifolia—The plum-leaved *Spirea*. Has small, glossy foliage, bearing a mass of small, double white flowers. Very floriferous; May. Often called the "Bridal Wreath *Spirea*."

S. Reevesi—This has long, narrow leaves, and large corymbs of white flowers, which nearly cover the whole plant. May.

S. Reevesi flore pleno—This is like the preceding, with the difference that it has double white flowers, instead of single flowers.

S. Thunbergi—(*Thunberg's Spirea*.) A Japanese species, and very noticeable for the extreme delicacy of its foliage, which consists in willowy leaves and white blossoms, about the end of April and commencement of May.

S. Van Houtti—A graceful spreading shrub, and free bloomer of white flowers in early June. A very fine variety.

Sweet Scented Shrub, or Carolina Allspice.

(*Calycanthus floridus*.)

A favorite shrub, with fragrant wood and flowers of a rich, chocolate color, rich foliage; blossoming in June, and at intervals throughout the season.

Snowberry. (*Symphoricarpus*.)

Red Fruited, or Indian Currant—(*S. vulgaris*.) Has red berries that stay on all winter; quite showy. June.

Snowberry—(*S. racemosus*.) A well-known shrub, with small, pink flowers and large white berries, that remain on the plant through part of the winter.

Stephanandra.

S. flexuosa—Valuable for the beauty of its foliage. The leaves are fine and delicately cut, but flowers are inconspicuous.

Sumach.

Cut-Leaved Sumach—A very striking plant of moderate size, with deeply cut leaves, resembling those of a fern, and which turn to a rich red in the fall.

Tamarix.

African—(*T. Africana*.) This is a very beautiful shrub, with small leaves somewhat like the Juniper, and delicate, small flowers in spikes. June.

T. Japonica—Smaller growing and more bushy than the preceding. Very delicate and beautiful in appearance.

Viburnum. (*Arrow Root*.)

V. opulus—(*High Bush Cranberry*.) Very ornamental on account of its red berries, resembling cranberries, and which hang until destroyed by frost. The flowers are not as showy as the common Snowball, but a month later.

V. opulus sterilis—(*Common Snowball*.) A well-known variety, flowering in large globular clusters. White. Early June.

V. plicatum—(*The Japan Snowball*.) The foliage of this variety is particularly pretty on account of its handsome, olive-green plicated leaves, with brown beneath. It flowers very profusely; pure white.

Tree Japan Snowball—The same as the preceding, only trained to a small tree with a three foot stem. Very ornamental when in bloom.

Weigela. (*Diervilla*.)

These shrubs have a robust habit, bloom profusely and are of easy culture. They grow large and erect when young, but form graceful bending, widespread bushes when old. They bloom in June and July.

W. Abel Carriere—Flowers reddish-pink. Very desirable.

W. Eva Rathke—A new variety, remarkable for its reddish-purple flowers. One of the best.

W. Candida—Bears pure white flowers in profusion, and is decidedly the best white variety.

W. Montesquieu—New. Fuchsia-red flowers; buds carmine.

W. Floribunda—This is one of the very best of this class, it flowers profusely, and its crimson flowers make it very conspicuous among other shrubbery.

W. Rosea—The oldest kind, and well-known; it has rose-colored flowers and blooms profusely in May and June. Very good.

W. Van Houttei—Flowers carmine, and differs little from *W. Rosea*.

W. foliis variegati—Variegated-leaved. Leaves are distinctly marked with yellowish-white and green; more dwarfish in habit than the others. Flowers pink.

W. Voltaire—New. The flowers are a little larger and of a reddish-purple color.

EVERGREEN SHRUBS.

Yucca. (*Adam's Needle*.)

Y. filamentosa—(*Thready Adam's Needle*.) Broad, lance-shaped foliage, the flower stalk rises from the center, bearing numerous creamy-white, bell-shaped flowers. Quite a tropical looking plant.

Y. filamentosa bicolor—Same as the preceding, and having creamy-white lengthwise striped leaves.

Y. angustifolia—The leaves of this are very narrow, and therefore more delicate looking, but quite hardy.

Ashberry. (*Mahonia*.)

Holly-Leaved—(*M. aquifolia*.) A most beautiful shrub, with glossy, holly-like leaves, which change to brownish-green in winter, bears clusters of bright yellow flowers in May; very hardy.

Box. (*Boxus.*)

Dwarf—(*B. nana.*) Is used for edging around flower beds.

Tree—(*B. sempervirens.*) Is very ornamental as a single specimen on lawns, as well as for hedges. Slow grower; suitable for small yards.

Holly. (*Ilex.*)

American—(*I. opaca.*) A very handsome, large shrub, with beautiful leaves, having small spikes on their uneven margin; flowers small, yellow. Will thrive in the shade.

Kalmia. (*Laurel.*)

Mountain Laurel—(*K. latifolia*) A native evergreen shrub, with shining leaves and clusters of pink, or nearly white flowers. Want a somewhat shaded situation.

CLIMBING VINES.

Akebia. (*Akebia.*)

Japan—(*A. quinata.*) A vine with pretty foliage, the smaller leaves resembling the clover leaf; has clusters of purplish, fragrant flowers, of singular form.

Ampelopsis. (*Ampelopsis.*)

Virginia Creeper—(*A. quinquefolia.*) A native vine of rapid growth, leaves turn rich crimson in the fall; will cling to walls without training. This is often called the American Ivy.

Veitch's Ampelopsis—(*A. Veitchii.*) A recent introduction from Japan; entirely hardy. foliage turns brilliant red in the fall; small leaves, very much resembling that of a maple leaf; clings tightly to walls and is handsomer than the preceding; very desirable.

Clematis. (*Clematis.*)

Henryi—Very large, creamy-white flowers.

Jackmanni—Large, intense violet purple; remarkable for its velvety richness; free in growth and an abundant bloomer.

Paniculata—A native of Japan. Panicles of small, pure white flowers in wonderful profusion. Very fragrant.

Virgin's Bower—(*C. Flammula.*) Sweet scented; produces small, white flowers; very fragrant. A well known and elegant vine.

Honeysuckle. (*Lonicera.*)

Chinese Twining—(*L. Japonica.*) Holds its foliage nearly all winter; blooms in July and September, and is very sweet.

Belgian—(*L. belgica.*) Monthly Dutch Honeysuckle. Very free bloomer of fragrant red and yellow flowers.

Japan Evergreen—(*L. brachypoda.*) Is similar to the above. The leaves are more light green; retains its leaves much better than the above.

Japan Golden-leaved—(*L. brachypoda aurea reticulata.*) Beautiful foliage, sprinkled with golden spots.

Red Coral—(*L. sempervirens.*) Strong and rapid grower with scarlet inodorous flowers.

Semperflorens—A very free bloomer.

Ivy. (*Hedera.*)

English—(*H. helix.*) A broad leaved and hardy sort; prefers moisture and shade all season.

Variegated-leaf—(*Irish Ivy*) Very pretty. Leaves white and green.

AMPELOPSIS VITICIDA.

Trumpet Flower. (*Bignonia*.)

Scarlet—(*B. radicans*) A splendid climber on wood or stone; vigorous and hardy, with clusters of large trumpet-shaped, scarlet flowers in August.

Wistaria, or Glycine. (*Wistaria*.)

Chinese—(*W. Sinensis*.) A rapid grower, hardy; its pinkish-blue flowers are produced in long, pendulous racemes; very fragrant.

Chinese White—Same in flower and growth as the Chinese Purple, but color of flowers pure white.

Double Flowering—Purple and very double; rather a shy bloomer.

HEDGE PLANTS.

For Evergreen ornamental hedges, the most suitable and the most beautiful are the Hemlock Spruce, Arbor Vitæ, Norway Spruce and Tree Box. Well trimmed during the first part of June, they make a solid compact green wall, highly ornamental, around small and large yards. For screens, to conceal unsightly objects, the Hemlock, Arbor Vitæ, and Norway Spruce are the most suitable. For shelter or wind breaks, the Norway Spruce and the Pines—White, Austrian and Scotch—are very effective.

THE OSAGE ORANGE, [*Maclura aurantiaca*], is the most common hedge plant, well known in the Middle and Western States: it is of rapid growth, and its stout thorns render it very defensive; is very cheap, but also very handsome. It requires, though, frequent trimming during the summer to keep it in bounds, its tendency being to form a tree.

THE CALIFORNIA PRIVET is fast gaining in favor as a hedge plant, as its glossy, bright-green leaves and its bushy and rapid growth makes it a very desirable hedge plant. It is perfectly hardy and retains its leaves very late in the fall.

Many different kinds of shrubs make beautiful ornamental hedges. Among them the Berberry makes a nice hedge-plant, having thorns like the Gooseberry. The THUNBERGI is highly ornamental throughout the summer. See description under "Deciduous Shrubs."

ORNAMENTAL GRASSES.

Of these there are a good many varieties; of which I describe the best kinds as being the most striking and beautiful.

Eulalia Japonica — Green leaves. A vigorous grower with large plumes. Fine for groups

Eulalia Japonica Variegata—This is a Japan variety, having green and white striped leaves; is very showy.

Eulalia Japonica Zebrina — This is the most beautiful variety, the foliage being marked crosswise, white and green.

Eulalia Japonica — (*Gracillima univittata*) — A very pretty grass, with narrow, graceful foliage. Very valuable.

ROSES.

Persons unacquainted with the different sorts will do well to leave the selection to me, but in case they name the varieties, they will please state if I may substitute others equally good, should I not be able to furnish all the sorts named. There are many kinds so near alike in color and shape that only *experts* can tell their differences; and in all cases I will furnish good plants of such sorts as will, in my judgment, give the purchaser entire satisfaction.

Climbing.

Baltimore Belle—Pale blush, nearly white; very compact; the finest of the class.

Crimson Rambler—A remarkably fine new climbing rose of rapid growth, with handsome, glossy foliage. Produces deep crimson flowers of perfect double form in great quantities.

Empress of China—A very hardy, free blooming climber of good size; bright pink flowers. Very attractive.

Eugene Jardine—A free bloomer; makes good buds; cream white; large and full.

Greville, or Seven Sisters—Clusters large; flowers of various colors, from blush to crimson.

Prairie Queen—Bright rosy red, frequently with a white stripe; large, compact and globular.

Pink Rambler—This is like the Crimson Rambler, but the flowers are pink.

White Rambler—Like the preceding with white flowers.

Yellow Rambler—Has yellowish white flowers.

Rosa Wichuriana—This is a Japan creeping rose, also called "Memorial Rose," being especially used in cemeteries. It is very valuable for covering embankments and rocks. The flowers are single, pure white and bloom profusely in July. Although its natural habit is to creep, it may be trained to climb.

Moss.

Blanche Moreau—Pure white, large, full, and of perfect form; buds and flowers in clusters; freely furnished with deep green moss. Valuable variety.

Comtesse de Murinais—(*Libert, 1843.*)—Large size, pure white.

Red

Princess Adelaide—Fine reddish blush.

Raphael—Pale rose, very large and double; very mossy and a good fall bloomer.

GENERAL JACQUEMINOT.

Hybrid Perpetual.

American Beauty—Large, deep pink, shaded with carmine; delicious odor.

Anna de Diesbach—Large; bright rose.

Beauty of Waltham—Large and full; cherry, changing to bright rosy carmine; very fragrant and a good bloomer.

Blanche Lafitte—Pale pink and white, and of good shape.

Duke of Edinburgh—Dark velvety maroon, medium size.

Enfant de Mt. Carmel—Brilliant rosy carmine; very large.

Francois Levet—Large, rose color; resembles Paul Neyron.

BRIDE ROSE.

General Jacqueminot—Brilliant beautiful crimson.

Giant of Battles—Very deep crimson center; free bloomer.

Glory Lyonnaise—White, tinted yellow, large and moderately full.

John Hopper—Bright rose, with carmine center; large and full.

Jules Margottin—Brilliant crimson; large and full.

La Reine—Rosy pink ; large and double ; good grower.

Lord Bacon—Deep crimson shaded with scarlet and velvety black.

Louis Van Houtte—Rich, velvety crimson, deliciously perfumed.

Mad. Plantier—Pure white, large and double.

Madame Trotter—Bright red, large and full, good grower and bloomer.

Madame Victor Verdiér—Brilliant carmine crimson, large and full.

Madame Charles Wood—Large, brilliant red, passing to lively rose.

Magna Charta—Bright pink, very large, full, free bloomer and strong grower.

Mary Washington—Flowers pure white, very double, blooming in clusters. Hardy.

Marshall P. Wilder—Large, cherry carmine, full, well formed and very fragrant.

Resembles Alfred Colomb.

Marechal Vaillant Rosy crimson, large and double.

Miss Hassard—A beautiful pink rose of fine form and habit.

Paul de Neyron—Deep rose, free bloomer, vigorous, desirable.

Prince Camille de Rohan—Deep velvety crimson, large.

Souvenir of the Queen of England—Bright carmine, large and fine.

Tea, Bourbon, Noisette and Bengal Roses.

These are very free bloomers, but they require protection during the winter.

Appoline—Delicate pink ; large.

Agrippina—Brilliant fiery red, profuse bloomer.

Bon Silene—Rose color, free bloomer.

Bride—Pure white, large, very fragrant, free bloomer ; very good for forcing.

Bridesmaid—A sport from Catherine Mermet ; clear pink.

Catherine Mermet—Bright flesh color, large and full. Much cultivated for cut flowers.

Duchesse of Albany—A sport from La France, and called sometimes "Red La France," being like its parent only deeper in color.

Duchess of Edinburg—An elegant crimson bud, of good size and fine form. A new color among Teas.

Glorie de Dijon—Flowers very large on a combination of salmon, orange and buff colors. Hardy.

Hermosa—Clear rose ; constant bloomer.

Empress Augusta Victoria—Pure white with a pale lemon tint ; large and full ; free bloomer. New Hybrid Tea.

Isabella Sprunt—Sulphur yellow ; beautiful buds, profuse bloomer.

La France—Large and full. Silvery rose, changing to silvery pink; constant bloomer, poor grower.

Madame Caroline Testout—Color clear pink. Fragrance very pronounced. Said to be superior to La France.

Madame Cusin—An excellent rose. Pink, shaded with crimson. Grows thrifty and blooms profusely.

Madam Hostes—Tea rose with very large, perfect flowers and superb buds. Color, bright, clear yellow. Very vigorous.

Mlle. Augustine Guinnoisseau—(White La France)—Pure white, with a slight tint of flesh color.

Marechal Niel—Deep golden yellow; large, full and fragrant.

Margaret Dickson—White, with pale flesh center; large, fragrant; foliage large and dark green.

Marie Guillot—White, tinted with pale yellow; large and full.

Marion Dinglee—Color bright crimson; large; blooms all summer and, therefore, valuable for outdoor bedding.

Meteor—Rich, dark, velvety crimson; very fine in bud. Very vigorous.

Papa Gontier—Dark crimson, with rosy carmine center. Very valuable for forcing under glass.

Perle des Jardins—Straw color, sometimes canary-yellow; center orange-yellow; large, beautiful buds. Popular for cut flowers.

Safrano—Yellowish-buff; produces fine buds.

Souvenir de la Malmaison—Clear flesh color, with blush edges; large, double flowers; good grower and bloomer in open air.

Sunset—A sport from Perle des Jardins. Flowers rich shade of saffron and orange. Large, double flowers, with handsome buds.

Polyantha Roses.

Clothilde Soupert—White, shaded with pink. Free grower and free bloomer. Very desirable for bedding.

George Pernet—Color bright rose, with touches of yellow. It is continually in bloom and flowers quite large for this class.

Gloire des Polyanthas—Color bright pink, with a red ray through each petal; quite distinct. Flowers quite small.

Marie Pavie—Color rich, creamy-white, finely flushed with carmine. Flowers medium size; double; borne in large clusters.

Perle d'Or—Nankeen yellow flowers, with orange centers. Well formed flowers in large clusters.

RUGOSA RUBRA.

Rugosa Rubra—Japan variety. Flowers single ; beautiful rosy crimson, succeeded by large red berries, which add to the ornamental character of the plant.

Rugosa Alba—Japan variety. Single, pure white flowers of five petals. Highly scented.

HARDY HERBACEOUS PLANTS.

In landscape gardening these plants are very much used in shrubbery beds between the shrubs, because they often bloom after the shrubs have flowered. A general assortment of them can be furnished, thereby having flowers at different periods during the season.
